February 2017

Environmental Sustainability Report

Corporate EHS is preparing an energy report for investor and public consumption focusing on CBS's electrical usage during the 2014 through 2016 timeframe at our United Kingdom locations and at the 28 locations that account for 95% of our U.S. electrical consumption. The energy report, expected to be released in June of this year, will serve as the baseline for our ongoing energy efficiency initiatives and for subsequent annual reports.

We have engaged the services of an energy consultant to assist us in analyzing our energy data and our usage patterns by location and collectively. The data management and analytical tools provided by the consultant will provide verifiable and normalized energy data for reporting and comparative purposes, assist us in developing relevant metrics for quantitative energy efficiency goal setting, and identify potential energy saving opportunities for further evaluation. Looking ahead to 2018 and beyond, we will continually strive to refine monthly utility data collection workflow, to improve the practical value of the analytics, and to support broad collaboration.

In the short term, especially as we get things off the ground, we will be reaching out to you and others at your locations more than ever for help in data collection and to solicit participation on teams targeting corporate and local goal setting, energy reduction measurement and accounting, new technology vetting, etc. This endeavor is without a doubt a company-wide cross divisional undertaking with success dependent on coalescence around a multidisciplinary team. All input is welcome. Do not hesitate to contact David Templeman to share your ideas or volunteer your expertise.

EHS Progress Updates

- **EHS Webinars**
The Walking/Working Surfaces webinar was held on February 8th with upwards of 50 attendees. We are happy to accommodate future requests for this and other webinars.
- **AST and UST Database**
Thank you for your updates to our Tank Database. Updates are submitted to Risk Management as received.
- **E-learning**
Our e-learning vendor is working on the first of our courses, ENG Safety.
- **SOPs**
In conjunction with our safety audits, which will start in Quarter 3, we will be rolling out Standard Operating Procedures to assist our locations in their compliance efforts.
